Shuffling Questions in a Quiz – D2L Tutorial

This tutorial is for faculty who have previous experience using the Quizzes tool in D2L. For further information, please contact <u>elearning@camosun.ca</u> for assistance.

Scenario

This tutorial will cover the steps involved with shuffling questions in a quiz. This is different from a Question Pool, which delivers a random selection of questions from a larger bank. Shuffling questions means that students will see the same number of questions, but each student will see them in a different order.

Steps

- 1. Go to the **Quizzes** tool in your course.
- 2. Edit an existing quiz, or click on the **New Quiz** button to create a new quiz.
- 3. On the **Properties** tab, under **Quiz Questions**, make sure you have added all the questions you want to appear in the quiz. Then select **Shuffle questions at the quiz level**.

Properties	Restrictions	Assessment	Objectives	Submission Views	Reports Setup

5. Finish editing your Quiz, and click **Save and Close**.

Things to Remember

You can shuffle all the questions in a quiz, or add questions to sections (folders) and shuffle ONLY those questions. This means that you could have everyone start with the same question(s), then present a set of questions which would appear in a different order. You can also add a **Question Pool** section to a quiz containing shuffled questions. The sky's the limit! Just remember to preview your quiz before releasing it to make sure it is working the way you want it to.

The screen shot shows how you can set a new Section in a quiz to shuffle questions (go to Add/Edit Questions, click New \rightarrow Section, then select. Shuffle questions in this section):

Section Title *		
Shuffled Que	stions	
Hide Sec	tion Title from students	
ction Text		
Hide Sec	tion Text from students	
 Shuffle q 	uestions in this section	
Also shuffle	s sections and question pools in this section. Does not cascade to sub-sections.
