

Creating Audio Recordings in Kaltura Capture in D2L – A Student Kaltura Tutorial

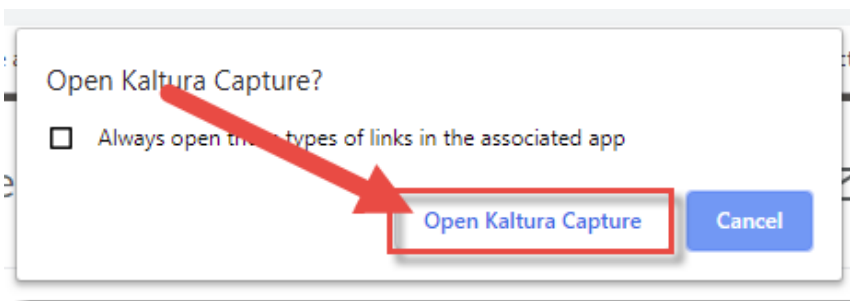

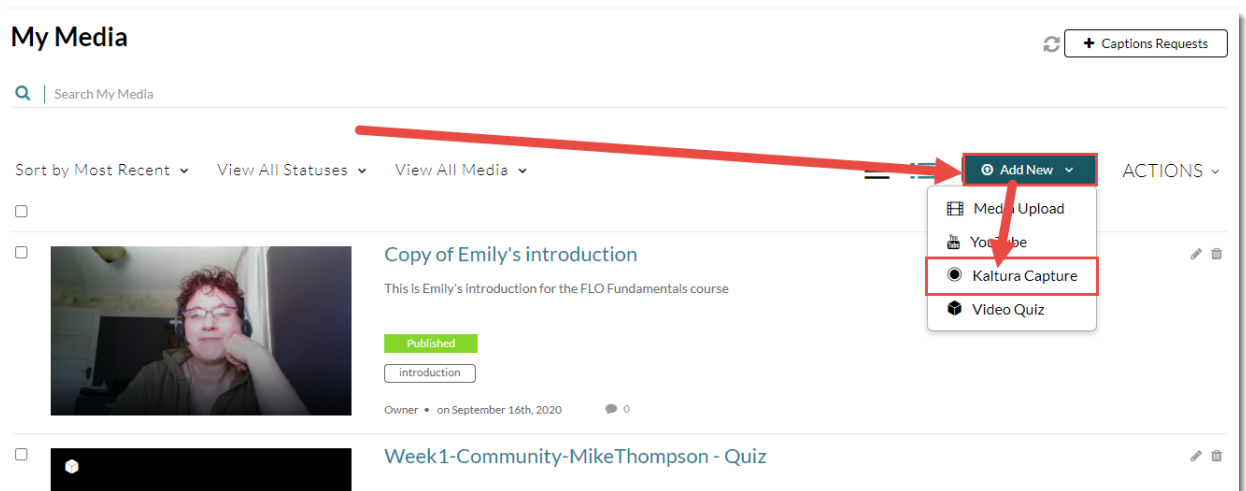

Kaltura is a new streaming media tool recently adopted by Camosun. Integrated into D2L, and supported by eLearning, Kaltura gives faculty and students a place to upload, create, and edit their course-related videos, audio files, and images. For further information or assistance, go to our [Team Dynamix Support portal](#) and click the appropriate Category to submit a ticket.

Scenario

This tutorial will cover the steps involved when you wish to record audio (voice recording) using **Kaltura Capture** through D2L. If you have not already downloaded **Kaltura Capture**, see the tutorial *Introduction to Kaltura Capture* for more information.

Steps

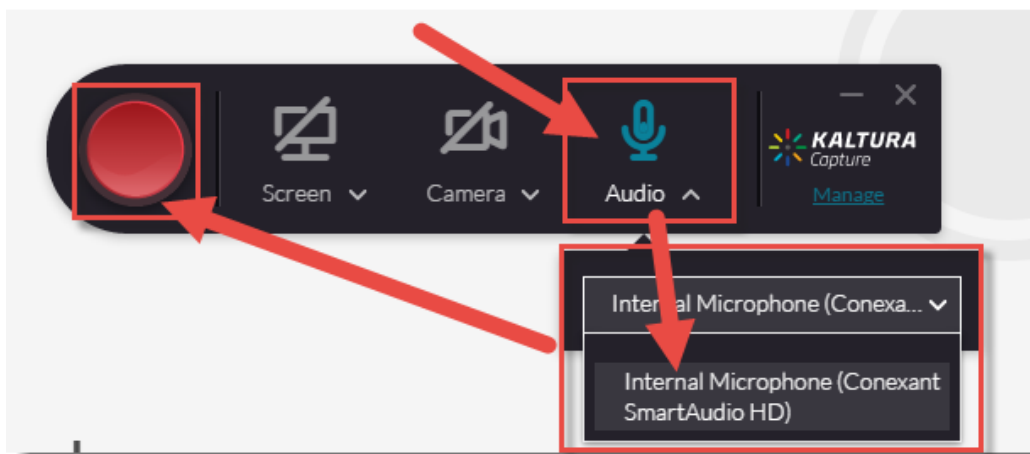

1. Go to your course in D2L.
2. Go to **My media** (through the link on your Navbar, or in your **My Tools** drop-down menu).
3. Click **Add New** and select **Kaltura Capture**, then click **Open Kaltura Capture**.

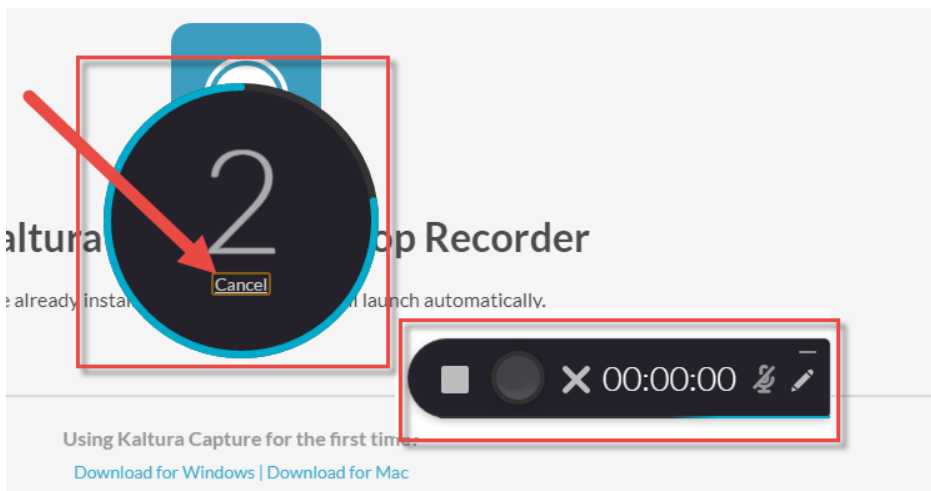

- We will be recording **Audio** only, so in the recorder, click on **Screen** and **Camera** to turn those features off (the icons will appear with a line through them).

- Click **Audio** and select the audio source/microphone you wish use (if you have more than one microphone option on your device), then click the record button (the big red button on the left side of the recorder).

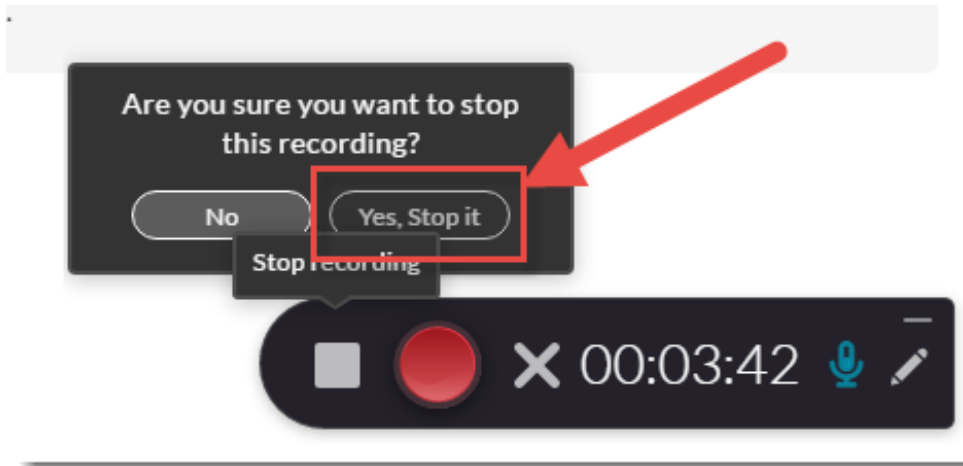

- There will be a 3-second countdown before the recording starts (you can click **Cancel** at any time).

- When the recording begins, talk into the microphone you have selected. Click the **Stop** button when you are finished and want to save your recording, the **Pause** button to pause the recording, and the **X** to cancel the recording (this will NOT save it).

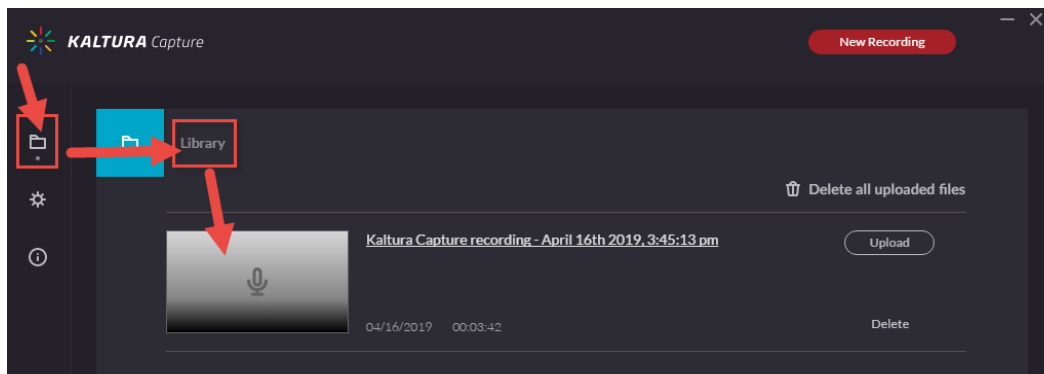

- When you click the **Stop** button, click **Yes, Stop it** to stop and save the recording.

9. The recording preview will then appear. You can play the recording, edit the **Title**, and add a **Description** and **Tags**. Click **Save** to save your changes, **Save and Upload** to save the recording and upload it to your **My Media** space, or **Delete** to delete the recording.

10. The audio recording will now appear in your Kaltura Capture Library.

Things to Remember

Before starting your recording, make sure to write down what you want to say. This is your script, and it will come in handy to keep you on track while you record.
